

Tired of breaking your back pulling out your Watermark Sensors?

Use the Collett Enterprises Watermark Sensor puller.

Simply clamp the locking pliers,
with the extended jaws, on the sensor.
Rotate 180 degrees side to side
to loosen the sensor.

Now hook the loop on the jack handle,
under the pin on the locking pliers

Put one hand on the locking pliers
and the other hand on the jack handle.
This will stabilize the sensor
while you pull it out. For long sensors
simply release the locking pliers
and slide it down on the sensor
to get another bite.

The angle iron on the bottom of the jack helps to keep it from sliding on ridges.
The jack folds flat for easy carrying and storage.
